CONTENTS TO VOLUME 59

Computational physics	*Issue*	*Page*
Parker, R.D. and R.L. Dewar 2-D, nonlinear spectral simulation of reconnective transitions on a periodic, planar current sheet with (1) smooth and (2) corrugated conducting wall boundary conditions with flow	1	1
Aly, J.J. Quasi-static evolution of a force-free magnetic field	1	13
Schnack, D.D., Z. Mikić, D.C. Barnes and G. van Hoven Magnetohydrodynamic simulation of coronal magnetic fields	1	21
Goedbloed, J.P. Stability of solar coronal loops	1	39
De Bruyne, P., M. Velli and A.W. Hood The ideal MHD stability of line-tied coronal loops: a truncated Fourier series approach	1	55
Van der Linden, R.A.M., M. Goossens and W. Kerner A combined finite element/Fourier series method for the numerical study of the stability of line-tied magnetic plasmas	1	61
Poedts, S., M. Goossens and W. Kerner Numerical simulation of the stationary state of periodically driven coronal loops	1	75
Krauss-Varban, D. Some aspects of finite element calculations applied to ULF magnetospheric cavity waves	1	85
Poedts, S., M. Goossens and W. Kerner Temporal evolution of resonant absorption in solar coronal loops	1	95
Toomre, J., N. Brummell, F. Cattaneo and N.E. Hurlburt Three-dimensional compressible convection at low Prandtl numbers	1	105
Nordlund, Å. and R.F. Stein 3-D simulations of solar and stellar convection and magnetoconvection	1	119
Hermans, D., W. Kerner and M. Goossens Linearly overstable magnetic convection in 1D compressible and non-uniform plasmas	1	127
Lin, Y. Numerical calculation of force-free magnetic field for solar active regions and its application to prediction of solar flares	1	139
Geertsema, G.T. and A. Achterberg MHD turbulence and accretion disks	1	145

Computational physics (continued)	*Issue*	*Page*
Velli, M., R. Grappin and A. Mangeney Solar wind expansion effects on the evolution of hydromagnetic turbulence in the interplanetary medium	1	153
Lee, L.C. Time-dependent magnetic reconnection: two- and three-dimensional MHD simulations	1	163
Scholer, M., T. Terasawa and F. Jamitzky Reconnection and fluctuations in compressible MHD: a comparison of different numerical methods	1	175
Otto, A. 3D resistive MHD computations of magnetospheric physics	1	185
Llobet, X., K. Appert, A. Bondeson and J. Vaclavik On spectral pollution	2	199
Zlokazov, V.B. Analysis of hidden anharmonic periodicities	2	217
Unonius, L. and P. Paatero Use of singular value decomposition for analyzing repetitive measurements	2	225
Hogeweij, G.M.D., G. Hordósy and N.J. Lopes Cardozo Heat transport analysis with error calculation	2	245
Wu, E.Y. and R.J. Friauf Techniques for achieving thermal equilibrium in molecular dynamics calculations for solids	2	259
Arnold, A. and N. Mauser An efficient method of bookkeeping next neighbours in molecular dynamics simulations	2	267
Teo, K.H., W. Allegretto, J.N. McMullin and H.G. Schmidt-Weinmar Self-consistent calculation of the density-of-states mass of holes in 2D silicon structures	2	277
Mohamed, A.R. and M.A. El Sharkawy 16-bit microprocessor in second-order state-space digital filter design and implementation	2	283
Randrup, J. Microcanonical sampling of momenta in simulations of many-particle systems	3	439
Burkitt, A.N. and A.C. Irving Inversion of the fermion matrix and the equivalence of the conjugate gradient and Lanczos algorithms	3	447
Forrest, B.M., A. Baumgärtner and D.W. Heermann Parallel simulation of dense two-dimensional polymer systems	3	455
Singer, S.J. Mulitparticle Monte Carlo moves: algorithm for solids with free-energy determination	3	463

Computational physics (continued)	*Issue*	*Page*
Weniger, E.J. and J. Cížek Rational approximations for the modified Bessel function of the second kind	3	471
Evans, M.W. On the isolation of possible artifacts due to cubic periodic boundary conditions	3	495
Computer programs in physics		
Grotendorst, J. Approximating functions by means of symbolic computation and a general extrapolation method	2	289
Bardin, D.Yu., M.S. Bilenky, T. Riemann, M. Sachwitz and H. Vogt DIZET – electroweak one-loop corrections for $e^+ + e^- \to f^+ + f^-$ around the $\mathring{Z}$ peak	2	303
Ding, L. and E. Stenlund A Monte Carlo program for nuclear collision geometry	2	313
Horáček, J. and J. Bok *K*-matrix calcuation for general nonlocal potentials	2	319
Allan, R.J., L. Heck and S. Zurek Parallel Fortran in scientific computing: a new occam harness called Fortnet	2	325
Portilho, O. MP – a multiple precision package	2	345
Lamarche, F. and C. Leroy Evaluation of the volume of intersection of a sphere with a cylinder by elliptic integrals	2	359
Yousif, H.A. and S. Köhler A Fortran code for the scattering of EM plane waves by two cylinders at normal incidence	2	371
Heuer, H.-O. A fast vectorized Fortran 77 program for the Monte Carlo simulation of the three-dimensional Ising system	2	387
Blaha, P., K. Schwarz, P. Sorantin and S.B. Trickey Full-potential linearized augmented plane wave programs for crystalline systems	2	399
Sherborne, B.S. and G.E. Stedman Recursive generation of Cartesian angular momentum coupling trees for SO(3)	2	417
Fan, G.Y. Electron diffraction simulation on Micro-VAX II computers with the aid of an array processor	2	429
Minter, A. and D.A. Jenkins Bremsstrahlung cross section for a point, spinless target	3	499
McGrath, R.L., A. Elmaani, J.M. Alexander, P.A. DeYoung, T. Ethvignot, M.S. Gordon and E. Renshaw A Monte Carlo reaction simulation for small-angle correlations between light charged particles	3	507
Rafelski, H.E. and B. Müller PC-Fortran programs for muon reactivation calculations in muon-catalyzed fusion	3	521
Odorico, R. COJETS 5.12: a Monte Carlo simulation program for $\bar{p}$–p and p–p collisions	3	527
